Experience

Clutch, Toronto, ON May 2025 – Present

Software Engineer

- Led the E2E architecture and refactoring of Clutch's payment system, handling and processing $10M+ in weekly revenue; engineered core modules for vehicle financing with lenders through DealerTrack, Stripe deposits, credit/debit/e-Transfer processing, and complex Bill of Sale financial calculations.
- Extended and built new APIs for existing payment workflows using our microservices (NestJS, Express, Sequelize) alongside Senior iOS engineers to integrate Stripe, Flinks, Affirm, and Iceberg payments across mobile apps, internal admin services, and frontend checkout flows.
- Designed and executed large-scale database operations, including one-time scripts updating 21M+ production rows, ensuring safe migrations and data integrity.
- Worked with AWS ECS, Terraform, Docker, and GitHub Actions to ensure smooth deployments for my features.
- Implemented feature experiments and optimizations on the customer-facing site with 100k DAU, such as an A/B test integrating financing costs into our checkout, React Query caching for API calls, and SEO/prerender schema updates to boost engagement.
- Conducted technical interviews on a biweekly basis, leading DSA, system design, and behavioural portions.
- I built the careers page! **clutch.ca/careers**

Phase 5, Toronto, ON April 2025 – May 2025

Software Developer (Contract)

- Programmed a Python-based automation tool to generate presentations based on market research reports.
- Worked as a solo developer alongside market research analysts to prototype automation solutions.

Proxima Command, Toronto, ON July 2024 – Oct 2024

Software Developer Intern

- Developed software in Python for an 8-player, 2-team physical arcade-style Starship Simulator using Pygame.
- Implemented a multithreading system using Python's threading and asyncio, allowing concurrent player actions.

The World of Yasu, Toronto, ON May 2023 – Jan 2024

Junior Frontend Developer

- Created a custom web app for an energy drink startup company using TypeScript, React and TailwindCSS.
- Proposed and delivered UI/UX adjustments beyond the Figma mockups, incorporating client feedback to create a more intuitive and visually appealing GUI.

Skills

Languages: TypeScript, Python, Java, JavaScript, C#, Go, C++, C
Frameworks: React, Node.js, Express.js, Sequelize, Spring Boot, Gin, Flask, TailwindCSS, TensorFlow, PyTorch
Databases: PostgreSQL, MySQL, SQLite, MongoDB
Tools & DevOps: AWS, Docker, Terraform, DBeaver, Insomnia, Gitbutler, Git, Firebase, Linux, RESTful APIs, Scrum

Education

Queen's University Sept 2020 – April 2024

Bachelor of Computing (Honours) - Computer Science Kingston, ON

- 3.7 GPA, Dean's Honour List (2022, 2023, 2024)

Projects

Tangle | Go, JavaScript, React, Gin, PostgreSQL, AWS, HTML, CSS, Docker

- Built a full-stack WebSocket-based messaging application using the Go's Gin framework.

Drone Detection Capstone Thesis | Python, PyTorch, YOLOv5, OpenCV, MATLAB, NumPy, pandas

- Developed a YOLOv5 computer vision detection system using open-source datasets achieving 77% accuracy, 94.4% precision and 93.2% recall scores.
